**Abstract:**

*In today's dynamic market scenario, while one may aim to take advantage of favorable scenarios in both equity and debt markets, there is an inherent risk involved. Thus while a person takes exposure to these respective asset classes it is important to adopt caution and do it smartly and prudently. When a person wants to invest a big lump sum amount in stock market. As markets are volatile and can go up or down very soon, there is always risk of losing a big chunk of their investment. Take a case where an individual wants to invest `10 lacs in Equity mutual funds and suddenly market crashes for next 2 months. In this case a big chunk of their investment will be lost, on the other hand if market moves up pretty fast, they can make a good profit. Here they have to decide their main focus. If it's minimizing risk and getting good decent returns in long-term, they should use something called Systematic Transfer Plan (STP). Systematic transfer Plan (STP) is a strategy where an investor transfers a fixed amount of money from one category of fund to another, usually from debt funds to equity funds.*

**Key words:** mutual funds, one time investment, systematic transfer investment (STP)

**1. About Stp Plan: (Systematic Transfer Plan)**

The MF industry is a growing and profitable industry. The market has been expanding though competition in the industry has been fierce. The mutual fund industry has registered a healthy growth in the past few years. Equity fund investment has the potential of wealth creation through capital appreciation, whereas debt fund investment accounts for consistent returns in the long run. Investor risk appetite plays an important role while choosing between the two and unpredictable nature of equity fund returns normally pulls investors away from them. What if some investor wants best of both worlds i.e. wealth creation and consistency at the same time? This has been made possible by the fund houses, as they have introduced the Systematic Transfer Plan (STP) concept. A STP is simply a mode to transfer money from one fund to another at pre-defined intervals. Commonly, investors park a lump sum amount in a debt fund, from where a regular amount is transferred at periodic intervals (monthly or quarterly) into the specific equity-oriented funds. For example, an investor may invest `1 lakh in a debt fund and opt for an STP of ` 10,000 on the first of every month for the next ten months in an equity fund. The STP route is an extension of the SIP way of investing. While SIPs allow you to invest small amounts of money in a mutual fund at regular intervals, STPs enable you to transfer money already invested in a mutual fund into another fund of your choice. Investing a lump sum amount in equity or mutual fund could be dicey for the investor as Equity markets are volatile and returns in equity mutual fund is linked to the performance of stock market. On the other hand if the investor invests the lump sum amount in debt funds it will generate less return when compared to other investment avenues. Systematic transfer plan helps to keep a balance of risk and return. Investors typically park a lump sum in a debt fund, say, an income fund, from which a fixed sum is transferred at periodic intervals into an equity-oriented fund. So, units equivalent to the transferred amount will be sold from the primary scheme and the same will be utilized to buy units in the new scheme. This switch to the new scheme is carried out at the prevailing net asset value (NAV).

**2. Objectives**

The objective of this study is to highlight the features of STP(systematic transfer plan) and to compare the benefits from STP plan and from One Time Investment Plan.

**3. Need for STP Plan**

A lot of people may not want to invest large sums of money in Mutual Funds. So one of the options they have is to keep their money in their bank account and then start a SIP. However the interest they earn from their savings bank account may be less. STPs fill this gap as a one time large investment is first made in a 'more stable' Mutual Fund product - for instance, a Debt Mutual Fund, and then a fixed amount can be transferred from this product to another 'more risky' product over a period of time. STPs hence make most sense from DEBT to EQUITY when markets are very volatile and risk is to be avoided. This can

be better than keeping money in the bank account and running a SIP because the invested money in the Debt product will be earning some returns, generally better than the savings bank account interest earned. Investment via STPs can be sold anytime. Hence it can also work like an emergency fund. In case one requires money urgently, this investment can be liquidated easily. STP is a facility for convenience.

#### 4. Importance of STP Concept

- STP concept gives investor the best of both worlds. It allows investors to build an equity portfolio without taking huge risk. The time, the money is not invested in equities, it generates huge returns in the debt portfolio.
- Apart from higher yields, investments in liquid funds get better tax treatments than bank FD's.
- Investors are opting for STP's to pocket higher short term yields.
- Over 10% of the money flowing into systematic investment plans(SIP'S) of equity schemes comes through STP'S as per industry estimates.
- Some fund houses also give the option of transfer gains ( made on liquid portfolio) into equity funds. Fund houses are promoting STP's to attract lump sum investment from.

#### 5. Types of STP

- **Fixed STP** – In this type of STP, the amount to be transferred is fixed (which is predetermined by you at the time of investment), which gets transferred to the desired (i.e. target) mutual fund scheme.
- **Capital Appreciation or Profit generated** – Under this STP option, the capital appreciation or the profit generated on principal amount gets transferred to the target fund and the capital part remains safe. Hence, this option works well if one intends to book regular profits and plough them into debt mutual fund schemes from the same fund house.
- **Flexi or Variable STP** – Under Flexi STP one have a choice to transfer variable amount. The minimum amount under this STP option is fixed, but subject to volatility in the market the variable amount is decided. If the NAV of the target fund falls, investment can be increased to take benefit of falling prices and likewise if the market moves up, the minimum amount of transfer is invested to take advantage of increasing prices. Transfer facility is available on a daily, weekly, monthly and quarterly interval.
- **Advantages** - An STP is a plan that allows investors to give consent to a mutual fund to periodically transfer a certain amount / switch (redeem) certain units from one scheme and invest in another scheme of the same mutual fund house. Thus at regular intervals an amount/number of units you choose is transferred from one mutual fund scheme to another of your choice. This facility thus helps in deploying funds at regular intervals.
- **Consistent Returns** – Through STP, you can transfer one money to a target equity fund while one is invested in a debt or liquid fund. Therefore, one will get the returns of the equity fund one is transferring into and at the same time remain protected as a part of your investment remains in debt.
- **Averaging of Cost** – Like SIP, in STP too, a fixed amount of money is invested in the target fund at regular intervals. Since it is similar to SIP, STP assists in averaging out the cost of investors by purchasing more units at a lower NAV and vice versa.
- **Rebalancing Portfolio** – STP facilitates in rebalancing the portfolio by allotting investments from debt to equity or vice versa. If a person investment in debt increases money can be reallocated to equity funds through an STP and if a person investment in equity goes up money can be switched from an equity to a debt fund.
- **Works as SIP** : One can invest in a Debt funds and from there one can start a STP to an Equity Fund, so it works like a systematic Investment Plan (SIP) .
- **Liquidity** : Generally one does STP from Debt → Equity funds, so your money is invested in Debt fund. This means you can sell it anytime if you want. Hence it works like a Emergency Fund also. In case you need money urgently, it can act like a liquid asset (at least for the time being in the start when you have more money in Debt fund)
- **Growth in Money** : Not to forget that the money is invested in Debt funds, as the money is also growing at debt returns , at least the part which is lying in the debt funds .

#### 6. Working of STP Plan

Very often while reallocating assets within categories of mutual funds, investors tend to give redemption request forms and then invest into another mutual fund scheme as they deem fit, rather than using the options such as Systematic transfer plans(STPs) Under STP, a lump sum amount earlier invested by you can be transferred at regular intervals in a piecemeal manner systematically into another mutual scheme (as desired by you) of the same fund house. Typically 6 such transfers are allowed by the fund houses. Also, most funds houses generally allow an STP from a debt mutual fund scheme to an equity mutual fund scheme, and only handful of them allow it vice versa. Likewise, most fund houses allow a monthly or a quarterly option, while a handful of them allow even a weekly or a quarterly option. Moreover different fund houses have different requirements for the minimum amount to be invested through STP.

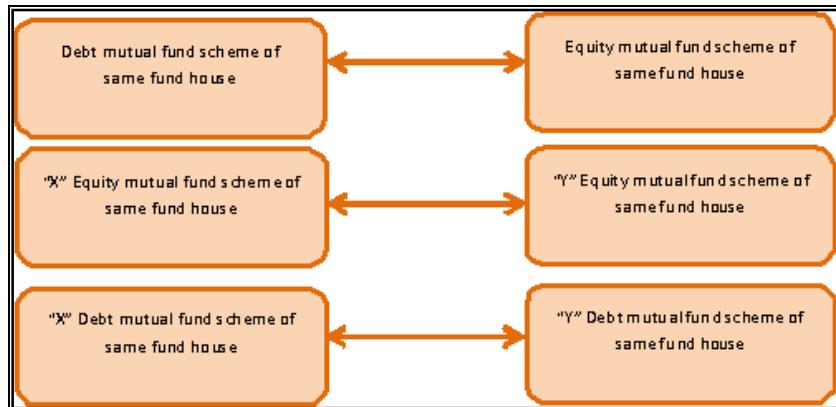

Figure 1

To understand the systematic transfer mechanism in this current life two funds have been selected from ICICI mutual funds. One is from debt scheme, other one is from equity scheme and the debt scheme have a daily STP in a equity scheme. The schemes are:

- **ICICI Prudential Discovery Reg**
- **ICICI Prudential MIP - 25 - Regular Plan - Growth**

To make this plan easy to understand two investors are taken namely investor A and investor B. Investor A invest a lump sum amount of ` one lakh as a one time investment in a equity scheme namely ICICI prudential discovery reg on 1<sup>st</sup> Jan 2008, the fund has a NAV value of `39.84 and investor A buys a unit of 2510.04. Investor A plan to have redemption of his account on 31st dec 2008 on that day the fund has NAV value of has been decreased to rs `17.61 hence investor have only (i.e)  $2510.04 \times 17.61 = \text{rs`}44201.81$ . investor have only `44201.81 in his capital amount. On dec 31<sup>st</sup> the NAV of ICICI prudential discovery reg to decrease to `17.61 it mainly happens because of the fall in share market. Finally it was found that investors have only rs `44201.18 in his one time investment from `1,00,000.

Investor B on Jan 1<sup>st</sup> 2008 plan to invest `1,00,000 in a debt scheme namely ICICI Prudential MIP-25 reg and want to start transferring ` 400 from it to an equity scheme namely ICICI prudential discovery reg on a daily basic on that year. The STP plan start to activate on 2<sup>nd</sup> Jan 2008 on a daily basic transfer of `400 from debt scheme to equity scheme. The fund value of debt scheme starts falling to the extent of this outflow, adjusted for gains (or) losses it makes every day of its transfer. Meanwhile the investment value of equity scheme ICICI prudential discovery reg rises by `400 every day , in addition to the gains (or) losses it makes.

STP plans start to work, when rs `1,00,000 invested in bond scheme at the beginning of the year at the NAV value of rs 16.69 which helps to buy 5990 units. In the next day 2<sup>nd</sup> Jan same units are sold and the proceeds from these (` 400, the pre determined amount) is shifted to equity scheme. The balance amount left in bond scheme, when NAV rise the bond will have a profits. The benefits of the STP is that even if the NAV declines in one fund, its possible that it will rise in the other scheme, thus ensuring that investor do not suffer a loss. By spreading investments through daily STP across market conditions the STP allows investor to average out the purchase cost of their investments and gives a better chance to earn high returns over a period of time. This especially works in favor when the markets are either volatile or in a down trend. At the end of dec 31 2008 investor B wish to redeem his fund at the end investor B holds a debt units of 409.96, NAV of debt scheme is 14.64 and investor have a closing balance of ` 6000 in debt scheme and investor holds a equity scheme units of 3892.38, NAV of equity scheme is `17.71, investor holds a closing value of `68544.84 finally investor B holds ` 74544.84 as his closing balance from his one lakh. When comparing with two investor A&B investor B holds a better amount of `74544.84 at the end of the year while the investor A holds only a amount of ` 44201.81. Hence investment made through Systematic Transfer Plan is better than investment made through one time investment.

**INVESTMENT IN BOND FUND ON INCEPTION**

DIFF	30343.04	ONE TIME	44201.81
		STP	74544.84

Illustrations clearly shows that capital erosion is less under STP when compared with the capital erosion under One Time Investment during the year 2008 when the market experienced down trend. Thus it is inferred that investment through STP gives better return than one time investment if the market is favorable and a loss is minimized when the market trend is not favorable.

## 7. Conclusion

Thus it can be concluded that STP is suited to investors who want to invest lump sum into debt funds and at the same time want some equity exposure in order to gain higher returns on their investment. STP can also work as a tool to transfer from equity fund to debt scheme giving you the dual advantage: earn profits from your equity investment and preserve capital by moving into debt. From the foregoing analysis it is suggested that investors who are aiming for safer and more returns than normal ordinary investment plans ( Bank Deposits, Fixed Deposits, Bonds, Onetime investments Etc. related with stock markets) , this strategy of STP will be the best and ideal.
